

SHYHI

ANDROID APP

WOODWARDUX

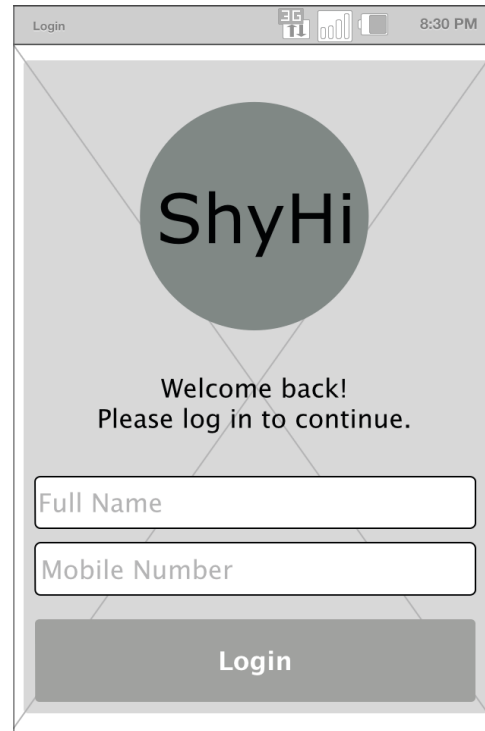

V01 | October 9, 2014

Welcome

First time users and users who have logged out will see this screen upon opening the app.

In this user flow, the user taps "Login"

Login

User must enter their Full Name and Mobile number. These will serve as their "Username" and "Password"

The error/success validation should follow the same format as seen in the Create Account flow

Home

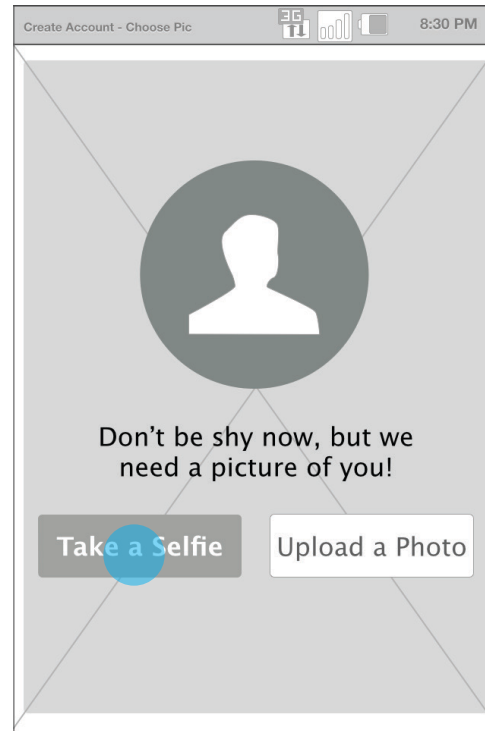

Once a user logs in, they will see the home page which is TBD at this point

Welcome

First time users and users who have logged out will see this screen upon opening the app.

In this user flow, the user taps "Create Account"

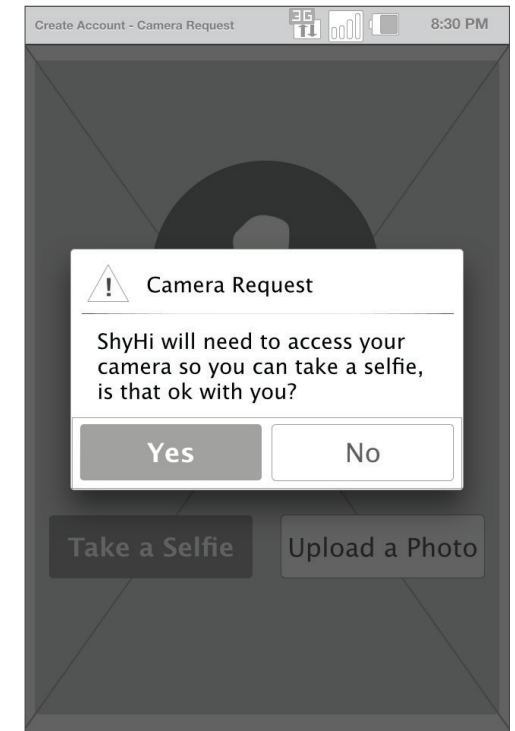

Choose Pic

User must provide a picture

They will have the option to either take a photo "Take a Selfie" or upload an existing photo "Upload a Photo"

User taps "Take a Selfie"

Camera Request

The app should request the users permission to access their native camera app

If the user taps "No" return them to the "Choose Pic" screen

User taps "Yes"

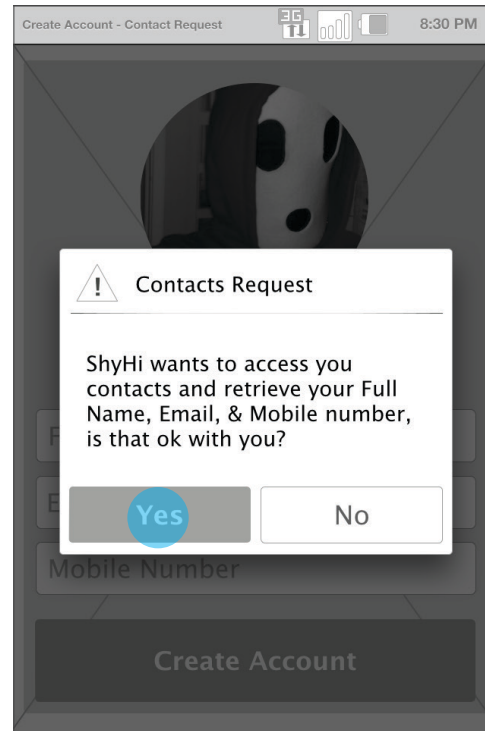

SHYHI - CREATE ACCOUNT: TAKE A SELFIE & CONTACT INFO

Camera

Leverage the Android OS UI. It will change based upon the OS version

User takes a picture and is then taken to the next screen.

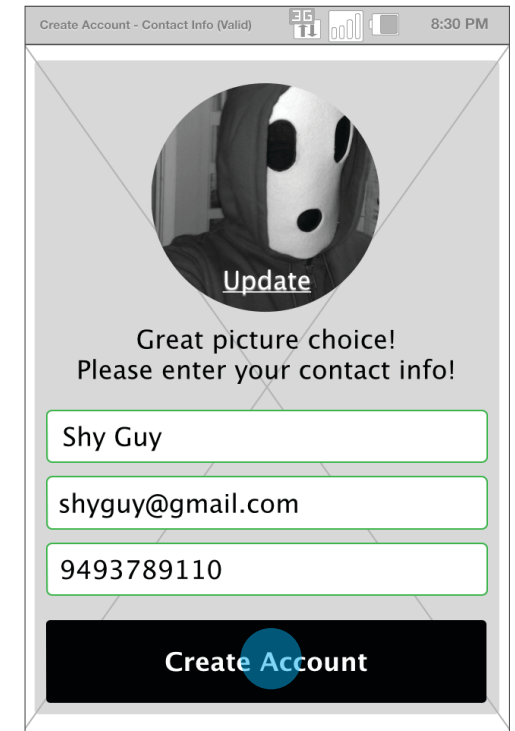

Contacts Request

The app should request the users permission to access the devices contact book. The app should populate the fields based upon the users own contact profile

If the user taps "No" just leave the field blank for them to manually fill it

User taps "Yes"

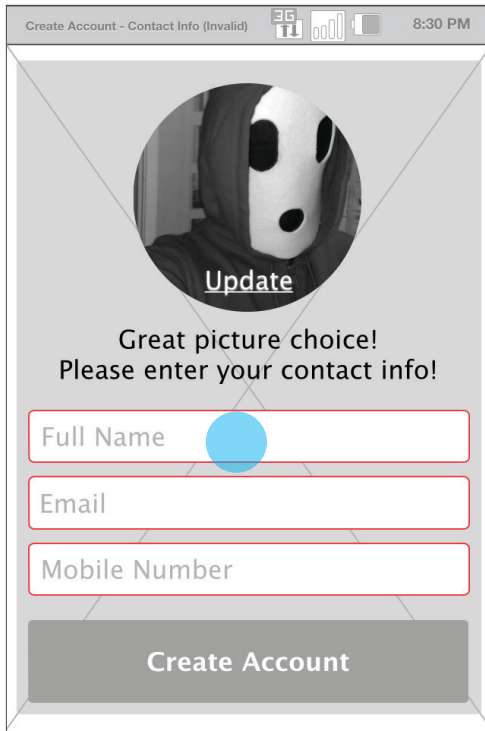

Contact Info

The user will see the fields populated for them and the "Create Account" button should turn to an active state.

User can also change their image. "Update" will return the users to the "Choose Pic" screen

User taps "Create Account" and will logged in and then taken the app home page which is TBD

SHYHI - CREATE ACCOUNT: FORM VALIDATION

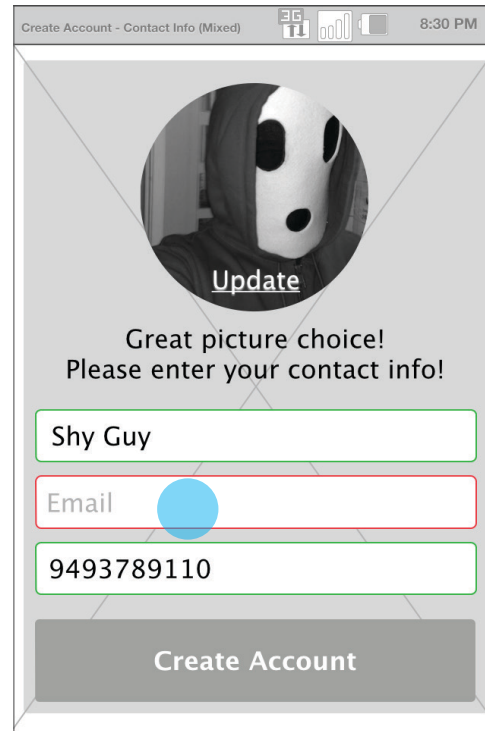

Contact Info - Invalid

The user should see empty/invalid fields highlighted in red to fix.

If fields are not valid, the “Create Account” button will be in an inactive state

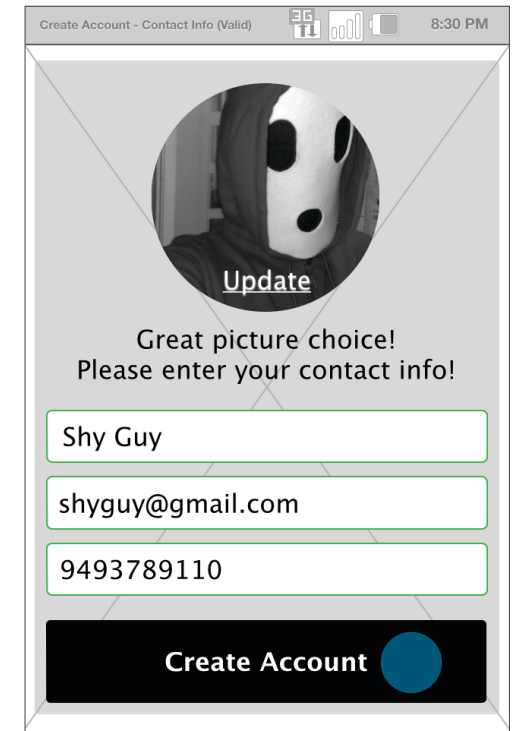

User enters data in to the fields

Contact Info - Mixed

As the user fixes fields, they should turn green.
